Oral Irrigation (Water Flosser, Waterpik, Hydrofloss, etc.) Instructions

1. Fill the entire reservoir with lukewarm water.
2. Add any recommended additives for enhanced biofilm control if indicated.
3. Always place tip in mouth before turning unit on.
4. If the CLASSIC JET tip was recommended by your hygienist:
 - Turn the pressure control dial to the lowest setting for the first-time user.
 - Using this tip, gradually increase pressure over time until ideal operating pressure between 6 and 8 is reached.
 - Lean over sink and close lips enough to prevent splashing, while still allowing water to flow from mouth into the sink. Turn unit ON.
 - Aim the tip just above the gum line at a 90 degree angle.
 - Starting with the back teeth, follow the gum line and pause briefly between teeth. Continue until all areas around and between the teeth have been cleaned.

Add 15 Drops
Grapefruit Seed
Extract
To
Water
Reservoir

5. If the PIK POCKET tip was recommended by your hygienist:
 - Turn the control to 1. This tip should ONLY be used with the Pressure Control set to 1.
 - To use this tip, place the soft tip against a tooth at a 45-degree angle and gently place the tip under the gum line, into the pocket.
 - Clean by gently following gum line, inserting tip in between teeth.
 - Continue tracing along the gum line until all the areas of the mouth are irrigated

*Note - Most companies recommend replacing tip every 3 months.
