

Jan 9 2024

Stephanie & Nikolai -

Thank you for allowing me the pleasure to take care of Lucy together and look forward to seeing her again now that she is part of the family!

For Reference - I would soak Lucy went into heat on the 2nd of January.

I gave Lucy hen Simparico on 1/7/24 and she happily ate it with no reactions.

The blood change also went smoothly with no issues.

I washed all new bedding as there were spots of blood accumulated from sleeping over night.

Enclosed is her Christmas toys and gingerbread collar. Her bandana from the Groomen and Receipt from Pet Food Express for her bibble.

Any new stays will be at the rate of \$15 per day.

Sincerely

Stephanie

Wetland forest

is likely to increase

soil compaction will occur
and from about 3% slope
(approximately 100m) there will be no
atmospheric infiltration (soil
mineralization) so soil quality will drop
as the soil becomes more
acidic.

Soils below the original surface
will also become more acidic
as the humus layer is lost.

Soil organic matter will drop
as good soils leach away from
the surface leaving behind
poor soils.

Soil organic matter will drop
as good soils leach away from
the surface leaving behind
poor soils.

Soil organic matter will drop
as good soils leach away from
the surface leaving behind
poor soils.

Soil organic matter will drop
as good soils leach away from
the surface leaving behind
poor soils.

Soil organic matter will drop
